

Subsidy and Grant Services

Successful project proposals in energy and environmental programmes

To make an innovative energy or environmental project financially feasible, a grant or subsidy may be needed. Successful project proposals often require specific expertise and the commitment of much labour capacity.

By offering expertise and alleviating the labour requirements within your organisation, Partners for Innovation can help you to submit a successful project proposal to all energy or environmental subsidy programmes in The Netherlands or European Union. Furthermore we can assist in the project implementation on a co-operation basis with your organisation.

Project Approach

Partners for Innovation can assist in the entire proposal procedure as well as in the project implementation and reporting. Our expertise can be applied in several phases:

- Feasibility studies (technical and operational), drafting the technical and financial proposal;
- Project management and co-ordination, quality control and reporting;
- Environmental assessment of a project, product or system (CO₂ footprint, Life Cycle Analysis, Value Chain);
- Business model development, market exploration (demonstration projects and approaching possible customers) and market analysis (stakeholder analysis and management);
- Assessment of local socio-economic, cultural and political situation and context;
- Product / system design.

Co-operation Basis

When writing a project proposal, Partners for Innovation prefers to work on a co-operation basis:

- Our main interest is to initiate meaningful and interesting projects for our client and ourselves. Therefore Partners for Innovation will only engage in a proposal process if we can play a meaningful role in the project once the grant or subsidy is granted;
- Partners for Innovation is willing to invest time and expertise to submit the proposal, if we believe the project has a high potential to receive the grant or subsidy. We co-operate as a partner and take our share in risks and costs. The reimbursement of our work in the proposal stage can be partly dependent on the success of the proposal.
- Partners for Innovation works as full partner or subcontractor in the project, depending on our role in the project and the administrative requirements of the programme.

References

Partners for Innovation has been successful in the following programmes:

- EC Framework Programmes for RTD (lead in writing four awarded projects);
- EC Alterner Programme;
- Dutch SenterNovem programmes: M&T (Milieu en Technologie), BSE (Besluit Subsidies Energie Programma's), UKR (Energie transitie – Unieke Kansen Regeling).
